ADR-2026-14: Asynchronous Queue Migration for Payment Webhooks

Author: Gourav Das | Target: Payment-Router / Svix-Webhook-Worker

Status: Active - Supersedes DEC-112 | Date: 2026-10-19

1. Context: Neon connection exhaustion during webhook surge on Payment-Router.

2. Architecture Rule: Payment-Router MUST NEVER query Neon directly on ingress.
   Svix-Webhook-Worker handles async delivery queue with bounded concurrency.

3. Mitigation Runbook: kubectl scale deploy/svix-webhook-worker --replicas=6
